

# Honeywell HumidIcon™ Digital Humidity/Temperature Sensors: HIH6000 Series

±4.5 %RH Accuracy

## DESCRIPTION

Honeywell HumidIcon™ Digital Humidity/Temperature Sensors, HIH6000 Series, are digital output-type relative humidity (RH) and temperature sensors combined in the same package. These sensors provide an accuracy level of ±4.5 %RH.

The series consists of the following variations, offering customers the ability to choose housing style (SIP 4 Pin or SOIC-8 SMD), filter (hydrophobic filter or no filter), output (I<sup>2</sup>C or SPI), and packaging (tape and boxed, tape and reel, or samples on tape):

Series*	Output Type	Supply Voltage	Housing Style	Filter	Accuracy	Output	Packaging
HIH6020-021-xxxx	digital	2.3 Vdc to 5.5 Vdc	SIP 4 Pin	without filter, non-condensing	±4.5 %RH	I <sup>2</sup> C	100 to 249 units on tape and boxed, 250 units or more on tape and reel; or 5 sample pieces on tape
HIH6021-021-xxxx			SIP 4 Pin	with filter, condensation-resistant		I <sup>2</sup> C	
HIH6030-021-xxxx			SOIC-8 SMD	without filter, non-condensing		I <sup>2</sup> C	1000 pieces on tape and reel; or 5 sample pieces on tape
HIH6030-000-xxxx			SOIC-8 SMD	without filter, non-condensing		SPI	
HIH6031-021-xxxx			SOIC-8 SMD	with filter, condensation-resistant		I <sup>2</sup> C	
HIH6031-000-xxxx			SOIC-8 SMD	with filter, condensation-resistant		SPI	

\*See Order Guide on page 8 for complete catalog listings.

## FEATURES AND BENEFITS (★=competitive differentiator)

- ★ **Industry-leading long term stability (1.2 %RH over five years):** Competitive humidity sensors require a 12 hour at 75 %RH rehydration process (which requires special equipment chambers) to correct reflow temperature offset. Honeywell's sensor also experiences an offset after reflow; however, it only requires a five hour rehydration under ambient conditions (>50 %RH):
  - Minimizes system performance issues
  - Helps support system uptime by eliminating the need to service or replace the sensor during its application life
  - Eliminates the need to regularly recalibrate the sensor in their application, which can be inconvenient and costly
- ★ **Industry-leading reliability (MTTF 9,312,507 hr):** Thermoset polymer capacitive sensing element's

multilayer construction provides resistance to most application hazards such as condensation, dust, dirt, oils, and common environmental chemicals, which help provide industry-leading reliability

- ★ **Lowest total cost solution:** Offers customers the lowest total cost solution due to the sensor's industry-leading combined humidity/temperature sensor
- ★ **True, temperature-compensated digital I<sup>2</sup>C or SPI output:**
  - Typically allows the customer to remove the components associated with signal conditioning from the PCB to free up space and reduce costs associated with those components (e.g., acquisition, inventory, assembly)
  - Often eliminates problems that could occur from having multiple signal conditioning components across the PCB

# Honeywell HumidIcon™ Digital Humidity/Temperature Sensors: ±4.5 %RH Accuracy

- Simplifies integration to the microprocessor, eliminating the need for customer-implemented, complex signal conditioning
- ★ **Energy efficient:**
  - **Low supply voltage:** Can operate down to 2.3 Vdc, which allows use in low energy and wireless-compatible applications to enhance energy savings and prolong system battery life
  - **Low power consumption:** The sensor goes into sleep mode when not taking a measurement within the application, consuming only 1 µA of power versus 750 µA in full operation in a battery operated system; sleep mode helps maximize battery life, reduces power supply size, and reduces the application's overall weight
- **Package:**
  - **Housing style:** SOIC-8 SMD (Surface Mount Device) or SIP 4 Pin; ultra-small size allows for flexibility of use within the application, occupies less space on the PCB, and typically simplifies placement on crowded PCBs or in small devices; industry standard design simplifies design-in
  - **Filter:** Available with hydrophobic filter and condensation-resistance, allowing for use in many condensing environments, or without hydrophobic filter, non-condensing
  - **Tape and reel:** Allows for use in high volume, automated pick-and-place manufacturing, eliminating lead misalignment to the PCB and helping the customer to reduce manufacturing costs
- **Combined humidity and temperature sensor:** Allows the RH measurement to be temperature compensated, and provides a second, standalone temperature sensor output; allows the user to purchase one sensor instead of two
- **High resolution:** High 14-bit humidity sensor resolution and 14-bit temperature sensor resolution within the application help the user's system detect the smallest relative humidity or temperature change.
- **Wide operating temperature range:** -40 °C to 100 °C [-40 °F to 212 °F] allows for use in many applications
- **Optional one or two %RH level alarm outputs:** Allows ability to monitor whether the RH level has exceeded or fallen below predetermined and critical levels within the application
- **Multi-function ASIC:** Provides flexibility within the application by lowering or eliminating the risk and cost of OEM calibration
- **RoHS and WEEE compliant; halogen-free**

## POTENTIAL APPLICATIONS

### **Industrial:**

- **HVAC/R:** May be used to provide precise RH and temperature measurement in air conditioning/air movement systems, enthalpy sensing, thermostats, humidifiers/dehumidifiers, and humidistats to maintain occupant comfort and ideal storage humidity/temperature while achieving low energy consumption, supporting system accuracy and warranty requirements, maximizing system uptime, and improving overall system quality.
- **Air compressors:** May be used to provide precise RH measurement in compressed air lines, allowing the system to remove any condensation; dry compressed air is critical for customer process control measurement.
- **Weather stations:** May be used to provide precise RH and temperature measurement in ground-based and airborne weather stations, allowing real time and highly accurate monitoring/reporting of actual weather conditions.
- **Telecom cabinets:** May be used to provide precise RH and temperature measurement in the telecom cabinet HVAC system; maintaining proper temperature and humidity levels in the cabinet provides maximum system uptime and performance.
- **Incubators/microenvironments:** May be used to provide optimal temperature and RH levels to support critical processes and experiments, enhancing process efficiency with desired climate conditions.

### **Medical:**

- **Respiratory therapy:** May be used to provide precise RH and temperature measurement in sleep apnea machines and ventilators, enhancing patient comfort, safety and treatment effectiveness with warm and humidified air.
- **Incubators/microenvironments:** May be used to provide optimal temperature and RH levels to support critical processes and experiments, enhancing process efficiency with desired climate conditions.

## HIH6000 Series

Table 1. Environmental Specifications

Characteristic	Condition	Min.	Typ.	Max.	Unit
Operating temperature range	powered	-40 [-40]	–	100 [212]	°C [°F]
Operating humidity range	powered	0	–	100	%RH
Storage temperature range	unpowered	-40 [-40]	–	125 [257]	°C [°F]
Storage humidity range	–	30	–	50	%RH
Soldering temperature:					
manual	4 s reflow peak	–	–	350 [662]	°C [°F]
automated	30 s reflow peak	–	–	260 [500]	
ESD	MIL-STD 883H, Method 3015.7	–	–	±4	kV
Latch-up immunity	–	–	–	±100	mA
Shock	MIL-STD 202G, Method 213D, Test Condition C, half-sine, 6 ms ±3 perpendicular axis, 3 shock pulses per axis	–	–	100	g
Vibration	MIL-STD 202G, Method 204D, Test Condition D, 10 Hz to 2000 Hz	–	–	20	g
Light sensitivity	exposed to 50 lumens yellow light; exhibited no change in output				
Reliability (MTTF)	9,312,507 hr				

Table 2. Humidity Performance Specifications

Characteristic	Condition	Min.	Typ.	Max.	Unit
Supply voltage range	V <sub>DD</sub>	2.3	3.3	5.5	Vdc
Compensated humidity range <sup>1</sup>	5 °C to 50 °C [41 °F to 122 °F]	20	–	80	%RH
Compensated temp. range <sup>1</sup>	–	5 [41]	–	50 [122]	°C [°F]
Resolution	14 bit ADC resolution	–	–	0.04	%RH
Accuracy <sup>2</sup>	25 °C [77 °F] rising RH	–	±4.5	–	%RH
Response time	airflow minimum 20 l/min	–	6	8	s
Operating range	non-condensing	0	–	100	%RH
Long term stability	50 %RH for 5 years	–	±0.05	±1.2	%RH
Impact of soldering	IPC/EIA/JEDEC J-STD-020D, peak temp. of 260 °C [500 °F]	–	–	±2.5	%RH

Notes:

## 1. Conversion formulas:

14 bit ADC output for humidity to %RH: $\text{Humidity}(\%RH) = \frac{\text{Humidity\_14\_bit\_ADC\_output}}{2^{14} - 2} \times 100$	14 bit ADC output for temperature conversion to °C: $\text{Temperature}(^{\circ}C) = \frac{\text{Temperature\_14\_bit\_ADC\_output}}{2^{14} - 2} \times 165 - 40$
---	--

2. Accuracy is specified at the typical supply voltage of 3.3 Vdc and at 25 °C [77 °F]. It is the maximum deviation from the ideal transfer function of relative humidity measured over the compensated humidity range of 20 %RH to 80 %RH.

# Honeywell HumidIcon™ Digital Humidity/Temperature Sensors: ±4.5 %RH Accuracy

**Table 3. Temperature Performance Specifications**

Characteristic	Condition	Min.	Typ.	Max.	Unit
Supply voltage variation	2.3 Vdc to 5.5 Vdc	–	0.5	1.0	°C
Compensated temp. range	–	5 [41]	–	50 [122]	°C [°F]
Resolution	14 bit ADC resolution	–	–	0.025	°C
Accuracy (BFSL) <sup>1</sup>	5 °C to 50 °C [41 °F to 122 °F]	–	±1.0	–	°C
Response time	1/e slow moving air	5	–	30	s
Long term stability	25 °C for 5 years	–	–	±0.05	°C/yr
Impact of soldering	IPC/EIA/JEDEC J-STD-020D, peak temp. of 260 °C [500 °F]	–	–	±0.1	°C

**Note:**

1. Accuracy is specified over the compensated temperature range.

**Table 4. Current Consumption**

Characteristic	V <sub>DD</sub>	Abbr.	Condition	Typ.	Max.	Unit
Sleep current	3.3	I <sub>SLEEP</sub>	–	0.6	1	µA
Supply current: I <sup>2</sup> C	3.3	I <sub>DD</sub>	14 bit fastest update, no sleep	0.65	1	mA
SPI	3.3	I <sub>DD</sub>	14 bit fastest update, no sleep	0.75	1	mA

**Table 5. Input and Output Characteristics**

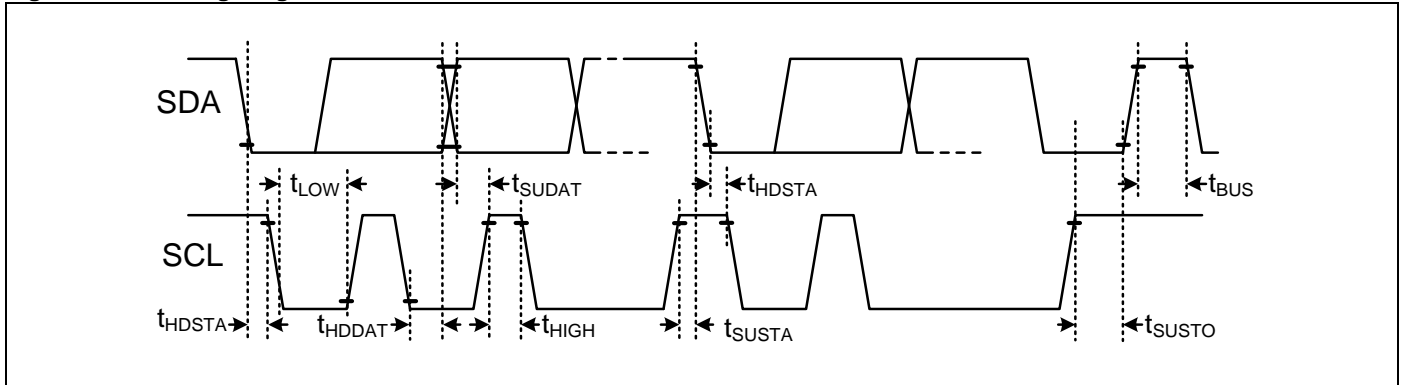

Characteristic	Abbr.	Condition	Min.	Typ.	Max.	Unit
Supply voltage	V <sub>DD</sub>	–	2.3	3.3	5.5	Vdc
Low level output voltage	V <sub>OL</sub>	I <sub>OL</sub> = 2.8 mA min.	–	–	20%	V <sub>DD</sub>
High level output voltage	V <sub>OH</sub>	I <sub>OH</sub> = -2.8 mA min.	80%	–	–	V <sub>DD</sub>
Low level input voltage	V <sub>IL</sub>	–	–	–	20%	V <sub>DD</sub>
High level input voltage	V <sub>IH</sub>	–	80%	–	–	V <sub>DD</sub>
Pull-up resistor: I <sup>2</sup> C	R <sub>P</sub>	–	–	2.2	–	kOhm
SPI (for SS only)	R <sub>SS</sub>	–	–	10	–	kOhm

**Table 6. Measurement Timing**

Characteristic	Abbr.	Condition	Min.	Typ.	Max.	Unit
Start-up time (power-on to data ready)	T <sub>STA</sub>	14 bit TH and 14 bit humidity resolution	–	50	60	ms
Update rate		application dependent: measurements are taken only when the application requests them

**Note 1:** Orders of 250 units or more are packaged on tape and reel.

# HIH6000 Series

## SENSOR REHYDRATION

### NOTICE

#### SENSOR REHYDRATION

- Exposure to elevated temperatures, such as those experienced during solder reflow, may dry out the sensing element. It is recommended that the sensor be allowed time to rehydrate after soldering or other high temperature/dry exposures.
- Exposure to these conditions will not permanently damage the sensor. It will generally return to its factory-calibrated value after rehydration.
- If rehydration is not performed, the sensor may read a slight offset that slowly disappears over time as the sensor becomes exposed to ambient conditions. Conversely, extended exposure to condensing and high humidity environments (>90 %RH) may cause a revisable shift in readings which will generally return to normal after the sensor has been allowed to dry off.

To rehydrate the sensor, expose it to room temperature under ambient conditions (>50 %RH) for a minimum of five hours.

## **WARNING**

### **MISUSE OF DOCUMENTATION**

- The information presented in this product sheet is for reference only. Do not use this document as a product installation guide.
- Complete installation, operation, and maintenance information is provided in the instructions supplied with each product.

**Failure to comply with these instructions could result in death or serious injury.**

### **WARRANTY/REMEDY**

Honeywell warrants goods of its manufacture as being free of defective materials and faulty workmanship. Honeywell's standard product warranty applies unless agreed to otherwise by Honeywell in writing; please refer to your order acknowledgement or consult your local sales office for specific warranty details. If warranted goods are returned to Honeywell during the period of coverage, Honeywell will repair or replace, at its option, without charge those items it finds defective. **The foregoing is buyer's sole remedy and is in lieu of all other warranties, expressed or implied, including those of merchantability and fitness for a particular purpose. In no event shall Honeywell be liable for consequential, special, or indirect damages.**

While we provide application assistance personally, through our literature and the Honeywell web site, it is up to the customer to determine the suitability of the product in the application.

Specifications may change without notice. The information we supply is believed to be accurate and reliable as of this printing. However, we assume no responsibility for its use.

## **WARNING**

### **PERSONAL INJURY**

**DO NOT USE** these products as safety or emergency stop devices or in any other application where failure of the product could result in personal injury.

**Failure to comply with these instructions could result in death or serious injury.**

### **SALES AND SERVICE**

Honeywell serves its customers through a worldwide network of sales offices, representatives and distributors. For application assistance, current specifications, pricing or name of the nearest Authorized Distributor, contact your local sales office or:
